To Whom It May Concern

Subject: Silchem Marketing Inc., USA
Siltech 100HV
RTV Silicone High Voltage Coating

Hub River Power Station located in Pakistan operates in an extremely harsh environment with salt laden prevailing winds, high humidity and low rainfall. In an effort to protect the outdoor electrical insulators with an advanced substitute to silicon grease used previously. Silchem Marketing Inc were selected in 2003 to supply their coating for the insulators in the 500kV outdoor substation. Silchem Marketing Inc. provided their Siltech 100HV RTV silicone high voltage insulator coating and a crew of Service Technicians attended site to clean and apply the coating.

A total of twenty four 500kv insulators were coated over a period of six days. The coating has performed exceptionally well and has not displayed any signs of tracking or degradation to date. Since the application there has also been no experience of electrical flashovers taking place.

Considering the performance of the coating, we are completely satisfied with the use of Siltech 100HV product and the Services provided by Silchem Marketing Inc.

Sincerely yours,

Iqbal Khan
